

TENNER About us

Our company

Our story began in early 2020, where our founding members wanted to catalyse digital transformation in SMEs. At TENNER, we are not technologists, but a team of individuals who are great believers in digitalisation. We aim to use our passion to build resilience to empower businesses in the SME sector. We apply our understanding and knowledge of the digital world to provide simple and direct digital tools to help SMEs automate and simplify essential parts of their businesses and services.

Being in the middle of a pandemic, we saw the call for help from SMEs who need to find extra resources to cover extra administrative and operational requirements in order to continue and sustain their businesses. TENNER have developed our COVID check-in app as our first digital tool.

Digital tools to run your business more effectively.

Our mission

TENNER's mission is to introduce simple and direct help to SMEs. Our product design aims to bring the advantages of digital transformation into their business with little financial and resource commitments.

TENNER strives to encourage more SMEs to engage in digital transformation, especially for businesses who are keen to take their first step towards digital efficiency and service level improvement.
